

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + Refrain from automated querying Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

PREFACE.

THE present is especially a practical, commercial, and industrial age: sewspapers, lecturers, popular authors, all lend their efforts towards the diffusion of sound and useful knowledge among the masses; and the commercial and industrial element has become the leading feature of instruction. The reason of this is obvious, if we but glance at the amazing strides of British Commerce, the wide range of Products and Manufactures in which we are interested, the constant and rapid inter-communication carried on with Foreign countries, and the progress of settlement in our Colonies. The Trade and Commerce of all Nations are new daily brought before us prominently through the press; new Products are continually introduced, new Trades are established, and the Raw Materials of Commerce now imported, are so numerous, and so widely different from what they were a quarter of a century ago, that it is difficult for those who are not specially engaged in a particular trade, to keep page with the general information necessary to be acquired.

We have scientific dictionaries in abundance, purely technological, or devoted to one or other of the arts and sciences. We have popular and useful commercial and nautical dictionaries, and cyclopedias—works, entering elaborately into the discussion of the laws, history, and regulations of trade, the geography of countries, &c.—but we have hitherto had no popular and concise work of reference on Trades and Trade Products, which might be conveniently consulted for the simple explanation of some strange term, some undefined raw material, or some new manufacture. At the time of the Great Exhibition of 1851, it was found impossible even to make out a list of trades, although the attempt was made.

As the city editor of a daily paper, and contributing largely to many cla journals. I especially found the want of a work of easy reference, defining the moneys, weights, and measures of the foreign countries with which are engaged in trade. On the arrival of any foreign mail, extracts are made from the journals and prices-current thus received, in which such words arrobas, piculs, maunds, garces, contos, milreis, &c. are mentioned; or product are named and quoted, probably under their local or native designations, which the majority of readers know nothing, but to which they can now readily turn for a definition. Any one who glances through the various foreign tariffs will be especially struck with the number of articles which are perfectly unintelligible by the names in which they appear, and yet a word or two or explanation would suffice to point them out clearly and intelligibly. The attention which India has lately attracted, and the abstracts from letters and Eastern journals, led also to the continual recurrence of names and terms which were not understood by the ordinary reading public, and an explanation of which appeared to be exceedingly necessary.

Commencing with a limited list of definitions for my own use as a journalist, I was gradually led to extend it, and have been induced to include in the work many foreign names for trades and products, which it appeared desirable to define, and to sender accessible to those who had not various foreign dictionaries at hand:

The scope and objects of the work are specially stated on the title-page; and I trust it will be found useful to many classes young and old, and supply a want as yet unfilled by the bulky and expensive books previously published; for of the 22,000 words and upwards given, the greater proportion could not be found in any other work of reference. It is especially a dictionary of substances or articles manufactured, imported, bought, sold, or dealt in, at home or abroad, and of the makers or dealers in these.

It professes to define only the ordinary and popular names.—English or foreign; and consequently an article must be sought for under its common designation. If an animal or vegetable product, its scientific name is given, and as much general information relating thereto as the limited space at command, in order to secure a cheap and portable volume, would allow. The statistics have been brought down, in all cases, to the latest period; and this feature alone

will be found exceedingly valuable for the ordinary purposes of ready commination, by saving much time and trouble in referring to bulky Parliamentary papers and numerous trade reports.

I may state, without fear of contradiction, that few persons have possessed set peculiar facilities for the completion of a work of this kind. From my stiended connection with periodical literature, and receiving regularly, for a long period, nearly all the brokers' circulars, the principal foreign and colonial larnals, and prices-current, I have become familiarised with the products, arms, and customs of different countries.

As one of the editors of the Furmer's Encyclopedia, and a regular contributor is the Mark-lane Express, the Farmer's Magazine, and the Edinburgh Journal of Agriculture—as a writer for many years past in the Shipping and Mercantile Gazette, the Engineer, the Mining Journal, the Civil Engineer's Journal, the Building News, the Journal of the Society of Arts, the Pharmaceutical Journal, and other class publications, I have necessarily become acquainted with the memicalities, the subjects, and the products brought under discussion; and there is scarcely a trade article named which has not come under my notice, from specimens in my own private collection, or in the South Kensington Museum, at which I am engaged. The information and materials thus derived from so many original sources, have been carefully weighed, compared, and tested.

A work like this, however, can never be complete. With the extending range and wants of Commerce, new articles are brought in, new trades arise, new technical terms are introduced in the arts and manufactures, with which it is starcely possible to keep pace, unless by an annual edition. Yet the groundwork has been here laid for a more extensive and comprehensive work, should it be considered desirable; and those readers into whose hands this little volume passes, will, at least, have the advantage of much useful information in a small compass, which has only been acquired by very extensive research, and years of assiduous plodding over volumes and journals and trade circulars in all languages.

During the progress of the work, I have experienced the advantage of a careful second revision of the proof sheets by Dr. P. A. Nuttall, an experienced exicographer; and amongst numerous other friends to whom I am indebted for much valuable information, are Dr. Lyon Playfair, F.R.S.; Mr. Hyde Clarke,

the author of a new and comprehensive dictionary of the English language; Mr. P. Le Neve Foster, Secretary of the Society of Arts; Mr. Daniel Hanbury Messrs. Adam Spielmann and Co., foreign bankers and bullion merchants; and Messrs. Spon, of Bucklersbury. Nor, must I omit to mention my especial indebtedness to Mr. John Christie, the well-informed Reader in the office of Messrs. McCorquodale and Co., who has, from time to time, suggested many additions, modifications, and corrections, and bestowed the most careful revision on the work, while passing through the press, so as to contribute in every respect to its accuracy and completeness.

Notwithstanding all the attention and care, however, which have been given to the work by myself and friends, I can scarcely expect that a dictionary of a novel a character, and embracing so wide a range of subjects, can be wholly from from error. I shall therefore be glad to be favoured with any suggestions of corrections for adoption in future editions.

P. L. SIMMONDS.

Reignier's dynamotheter consists of two plates of steel namoineter consists of two places or steel of a curved form, increasing in thickness towards the ends, which unites into solid cylindrical loops; the curved sides of the plates being placed opposite to each other, and the whole forming an entire elliptic spring. On the application of this instrument as a limit in the line of draught, the oval becomes lengthened in proportion to the degrees of force acting on the loops in opposite directions, and the curved sides approach more nearly towards each other, accordingly. The degree of approximation in the plates, is shown on a scale in divisions corresponding to hair and whole hundred-weights, by means of a cross rod secured to one plate acting on a crank attached to the opposite one, thus communicating its effect to the lever index. which, moving over the divisions of the scale, marks the varying degrees of force exerted each moment by the draught to which the instrument is subjected. Messrs. Cottam and Hallen, of London, and Mr. R. Clyburn of Uley, have invented dyna-mometers, which are improvements on those previously in use, as they also regis-ter the space through which the power is exerted.

Silk-weight-and-measure. The size or substance of a silk thread is usually esti-mated by deniers, an Italian and French weight, the comparative proportion of which will be understood by the appended to marks. The ounce troy and the ounce "Poids de Marc" of Lyons, by the latter of which silk is tested in France and Italy, are equal in weight, but are differently subdivided. The ounce troy in England is divided into 20 pennyweights × 24 = 480 grains; the ounce of Lyons, "Poids de Marc," into 24 drams × 24 = 576 deniers. The denier is therefore 1-6th less than the English grain, or, as the decimal 0 8833 is

The pound troy is to the pound avoirdupois as 14 to 17, nearly. The pound avoirdunois is to the pound "Poils de Marc" as 10 to 11, nearly. The pound "Poils de Marc" as 10 to 11, nearly. The pound "Poils de Marc" as 10 to 12, nearly. The pound troy as 4 to 3. The English silk real is 8.8 bouts of 44 inches, — 1009 yards. The French. 400 cls. or 475 metres, of 89371 inches, — 320 yards. The castom of the trade is to reckon 32 deniers to a dram. This has probably been adopted from ease of subdivision, but when carried out creates much arror. The standard of silk measure is about 400 yards; that length of a single filament from China cocoons will weigh 2 deniers, and from French or Italian 24. A 10-denier silk will thus be the combined thread of four or five cocoons.

shillings, or 182 sixpences. Sliver is not a

legal tender in Great Britain and her colonics, for more than 40s, at any one time. The relation of gold to silver, in the legal colonace of the United States, is as 1 to 15988; in Great Britain, as 1 to 14288; and in France, as 1 to 15499. Thus it will be seen, that one ounce of pure gold will, in the United States, be equal to that produced from the colonage of 15988 ounces of pure silver; in Great Britain it will be equal to that derived from only 14288 ounces of silver; and in France to 15499 ounces. Silver is the legal tender in China and the East. In March, 1858, an act came into operation in the United States, for reducing the quantity of silver in the silver coins of England. Prior to that period, the coined silver in the silver coins, retaining the same denomination, on the principle followed in issuing the silver coins of England. Prior to that period, the coined silver sivasy disappeared from circulation, but not since. The mint value of silver, is 58, 81, the ounce. The price of silver bars, standard, was in London, 594d, in January, 1850; reached 624d, in J

These figures show that our silver coinage is not regulated by the demand necessary to satisfy the hands of the public, but by some other undefined system. It is generally understood that the Bank of England has no control whatever over this coinage. In the last 17 years the British silver coinage has been under 5 millions (and of this £817,500 was worn silver, recoined since 1847), certainly an insufficient amount to supply the loss by wear and tear, export, melting, and the growing demands of commerce for small change. The following is a summary of the silver coinage since 1848.
